

POWDER

HANDLING & CONSOLIDATION

Retech continues to innovate through novel powder handling and recycling technologies. Retech Powder Handling systems provide state-of-the-art solutions for powder management which include sieving, blending and inert handling and storage of powder to meet our customer's most stringent quality requirements.

Retech Powder Consolidators allow for recycling of revert powder to produce ingots which can be further processed downstream to produce powder.

Materials

- Reactive metals
- Refractory metals
- Amorphous metals
- Super alloys
- Shape memory alloys
- Silicon

Applications

- Alloy production
- Ingot casting
- Atomization
- Precision casting

Retech can supply post-atomization, powder handling and consolidation equipment. We endeavor to work with companies in determining the optimal methods of design and manufacture for all of our systems.
